

ABSTRACT

1

2

3 A method for transferring an at least partly compressible file from a server
4 computer to a user computer, the server computer and user computer being connected
5 via a communication network, the method including the steps of at least partly
6 compressing the at least partly compressible file to produce a corresponding
7 compressed file, storing the compressed file on the server computer, upon request,
8 transferring the compressed file to the user computer, and decompressing the
9 compressed file at the user computer to reconstruct the at least partly compressible file.
